Abstract

My abstract

Text goes here.

$$\mathbf{y} = \mathbf{X}\boldsymbol{\beta} + \boldsymbol{\varepsilon}$$

```
fit <- lm(y ~ age + treatment, data = my_data)
```

Algorithm 1 Group descent algorithm for the group lasso

repeat
  for $j = 1, 2, \ldots, J$
    $\mathbf{z}_j = \mathbf{X}_j^\top \mathbf{r} + \boldsymbol{\beta}_j$
    $\boldsymbol{\beta}_j' \leftarrow S(\mathbf{z}_j, \lambda_j)$
    $\mathbf{r}' \leftarrow \mathbf{r} - \mathbf{X}_j(\boldsymbol{\beta}_j' - \boldsymbol{\beta}_j)$
until convergence

Tibshirani (1996) introduced the lasso.
