Abstract

My abstract

Text goes here.

$$\mathbf{y} = \mathbf{X}\boldsymbol{\beta} + \boldsymbol{\varepsilon}$$

```
fit <- lm(y ~ age + treatment, data = my_data)
```

Algorithm 1 Group descent algorithm for the group lasso

```
repeat
  for  $j = 1, 2, \dots, J$ 
     $\mathbf{z}_j = \mathbf{X}_j^\top + \boldsymbol{\beta}_j$ 
     $\boldsymbol{\beta}'_j \leftarrow S(\mathbf{z}_j, \lambda_j)$ 
     $\mathbf{z}'_j \leftarrow -\mathbf{X}_j(\boldsymbol{\beta}'_j - \boldsymbol{\beta}_j)$ 
until convergence
```
